

Vault Co Production Data Integrity Audit

Date: May 6, 2026

Scope: Production Data Integrity Audit across all 4 clients

Focus: Integration mismatches, stale data, fake metrics, and launch blockers

1. Executive Summary

This audit cross-referenced 11 data dimensions across the four active clients in the Vault Co Veronica Portal. The primary goal was to identify mismatches between client profile fields, integration sync logs (`integration_connections`), performance snapshots, and Veronica's launch readiness scoring.

Key Findings:

- **0/4 clients have clean matching data.** Every client has at least one data integrity flag.
 - **2/4 clients have integration status mismatches** (JJ Roofing Group, Open Forge Construction).
 - **2/4 clients have missing pixel/tracking data** (Acorns Roofing, Kaczmar Builders).
 - **1/4 clients has fake/demo metrics** (JJ Roofing Group).
 - **0/4 clients are truly launch-ready.** All are blocked by either missing integrations, pending approvals, or missing creative assets.
-

2. Client-by-Client Breakdown

2.1 JJ Roofing Group

Status: Blocked (4/7 Launch Readiness)

- **Integration Mismatch:** The client profile marks Meta Ad Account, Meta Pixel, Facebook Page, and GHL Location as **connected** (`true`). However, there are **zero entries** in the `integration_connections` table for this client. This indicates the profile fields were manually set or imported without a confirmed live sync.
- **Fake/Demo Metrics:** The client-level stats object shows all zeros (leads: 0, spend: 0, *CPL* :0). However, a weekly report draft exists for May 2026 Week 1 showing: 1,500*spend*, 27*leads*, 7*booked*, *CPL*55.56. This discrepancy must be reconciled.
- **Blockers:**
 - No approved creative assets.
 - No client intelligence extracted.
 - High-priority campaign draft (“Storm Season Lead Gen Campaign”) is pending human approval.

2.2 Open Forge Construction

Status: Blocked ($\frac{4}{7}$ Launch Readiness)

- **Integration Mismatch:** Similar to JJ Roofing, the client profile shows all four integrations (Meta Ad Account, FB Page, Pixel, GHL Location) as **connected** (`true`), but there are **zero live sync records** in `integration_connections` .
- **Data Duplication:** Two identical ‘May 2026 — Week 1’ weekly reports exist in draft status with \$0 across all metrics.
- **Blockers:**
 - No approved creative assets.
 - No client intelligence extracted.
 - High-priority campaign draft (“Kitchen Remodel Consultation Campaign”) is pending approval.

2.3 Acorns Roofing

Status: Blocked ($\frac{4}{7}$ Launch Readiness)

- **Integration Status:** Meta and GHL are genuinely connected. `integration_connections` shows recent sync activity (May 6, 2026) for both providers.

- **Missing Pixel/Tracking:** The client profile shows Meta Pixel as **not installed** (`false`), despite the active Meta connection.
- **Blockers:**
 - No approved creative assets.
 - No client intelligence extracted.
 - High-priority campaign draft (“Roof Replacement — Spring Promo”) is pending approval.

2.4 Kaczmar Builders

Status: Blocked (4/7 Launch Readiness)

- **Integration Mismatch:** `integration_connections` shows recent sync activity (May 6, 2026) for both Meta and GHL. However, the client profile shows Meta Ad Account, Meta Pixel, and GHL Location as **disconnected** (`false`). The actual Account IDs have not been confirmed and saved in the profile.
 - **Missing Pixel/Tracking:** Pixel is not marked as installed in the client profile.
 - **Blockers:**
 - Integration IDs must be manually confirmed and saved in the profile.
 - Before/After creative asset is pending review in the approval queue.
-

3. Summary of Issues

Issue Type	Affected Clients	Description
Clean Matching Data	None	No client has a perfectly reconciled data state.
Integration Mismatch	JJ Roofing, Open Forge, Kaczmar	Profile flags do not match <code>integration_connections</code> sync logs.
Missing Pixel/Tracking	Acorns, Kaczmar	Pixel is not marked as installed in the client profile.
Stale Sync Timestamps	None	All existing sync records are current (May 6, 2026).
Fake/Demo Metrics	JJ Roofing	Report draft contains data while client stats show zeros.
Launch-Ready	None	All clients are blocked by missing requirements.

4. Recommended Cleanup Steps

1. Reconcile Integrations (All Clients):

- For **JJ Roofing** and **Open Forge**: Verify the actual live connection in Settings → Integrations. Do not rely on profile flags alone, as there are no sync records.
- For **Kaczmar Builders**: Manually confirm and save the Meta Ad Account ID, Pixel ID, and GHL Location ID in the client profile to match the active sync records.

2. Verify Pixel Installation (Acorns, Kaczmar):

Confirm Pixel installation and update the client profile flags to `true`.

3. Resolve Fake Metrics (JJ Roofing):

Reconcile the client stats object with the May Week 1 report data, or delete the demo report if it is inaccurate.

4. Clean Up Duplicates (Open Forge):

Delete one of the duplicate May Week 1 reports.

5. **Clear Approval Queues (All Clients):** Review and approve the pending campaign drafts and creative assets to unblock launch readiness.
6. **Extract Client Intelligence (JJ Roofing, Open Forge, Acorns):** Complete the client intelligence extraction process for these clients.
7. **Upload Creative Assets (JJ Roofing, Open Forge, Acorns):** Upload and approve at least one creative asset per client.
