

Vault Co Veronica Portal — Production Checkpoint Report

Date: May 6, 2026

Author: Manus AI

Scope: Current production state of the Vault Co Veronica Portal

1. Current Commit

The live production environment is running on the `main` branch.

- **Commit Hash:** `44c30a4`
- **Message:** `fix: add explicit auth guards to meta/ghl integration status routes`
- **Timestamp:** 2026-05-06 16:36 UTC

2. Build Status

Status: PASS

- The Next.js build completes successfully with zero TypeScript errors.
- `37/37` pages compile successfully.
- Vercel deployment is live and responding with HTTP 200.

3. Auth Protection Status

Status: PASS

- All protected UI routes (`/`, `/clients`, `/ai-agent`, `/reports`, `/approvals`, `/settings`, `/creatives`, `/analytics`) correctly intercept unauthenticated

requests and redirect to `/login`.

- The login screen features the new two-column responsive layout with the Veronica brand panel.

4. Veronica Console Status

Status: PASS

- The `/api/veronica` endpoint is live and fully functional.
- The AI Agent page features the rich message rendering UI (data source pills, related links, action buttons).
- The console successfully queries live Supabase data (not mock data) and returns accurate, context-aware responses.

5. Veronica Intelligence Status

Status: PASS

- The `veronica.ts` intelligence engine is active with 13 diagnostic rules.
- Launch readiness scoring is accurate and reflects the recent data cleanup.
- Integration status mismatches are correctly detected and reported (e.g., Kaczmar Builders).

6. Meta/GHL Status Route Security Status

Status: PASS

- Explicit `getSupabaseSessionClient()` auth guards have been added to both `/api/integrations/meta/status` and `/api/integrations/ghl/status`.
- Unauthenticated requests now correctly return HTTP 401 Unauthorized.
- No secrets are exposed in the response payloads.

7. Data Cleanup Status

Status: COMPLETE

- **Kaczmar Builders:** Integration mismatches resolved (Meta Ad Account and GHL Location IDs are saved).
- **Open Forge Construction:** Duplicate May Week 1 report deleted.
- **JJ Roofing Group:** Demo May Week 1 report marked as [DEMO DATA – UNVERIFIED] .
- **Client Intelligence:** Minimal records seeded for JJ Roofing, Open Forge, and Acorns to unblock extraction workflows.

8. Remaining Manual UI Checks

The following items require an Admin to log in via the browser to visually confirm:

1. **Kaczmar Builders:** Confirm Meta Ad Account ID and GHL Location ID are visible in the Integrations tab.
2. **Approvals:** Confirm the 4 pending items are visible in the queue.
3. **Reports:** Confirm the Open Forge duplicate is gone, and the JJ Roofing report displays the demo badge.
4. **Client Intelligence:** Confirm the minimal seeded records are visible for JJ Roofing, Open Forge, and Acorns.
5. **Creatives:** Confirm the missing asset states for JJ Roofing, Open Forge, and Acorns.

9. Next Recommended Feature

Creative Library AI Analysis and Previews With the core intelligence engine and data pipelines stabilized, the next high-impact feature is the Creative Library. This will allow Veronica to analyze uploaded creative assets (images/videos) using multimodal AI, extract brand tone, and generate preview thumbnails for the approval queue. This directly addresses the current bottleneck where 3 out of 4 clients are blocked by missing or unapproved creative assets.
